

Our editorial staff is preparing the following topics:

Anilox rollers and anilox sleeves

→ Laser engraving of anilox rollers using four-beam technology

Last year, German company Schepers developed the Heliolas laser engraving device for standard applications which can also be used for the processing of ceramic surfaces of anilox rollers. For this reason, the company introduced the Heliolas AX version particularly designed for the laser engraving of anilox rollers.

Efficient press room: Better integration of the peripher

→ Prepress under closed loop conditions

Currently, closed-loop prepress systems are experiencing an unexpected renaissance in package printing. Thirty years ago, the DTP revolution "gave birth" to this type of closed-loop processing devices.

→ Entering the digital colour management

Vivo Colour Solutions is a family of tools for the digital colour management designed to achieve "Right First Time" during the colour matching procedure at the printing press.

Inks and varnishes

→ Everything you need to know when applying UV matt varnishes in flexo printing

→ New tactile varnishes for package printing

→ HD flexo printing – Optimum image quality with high colour strength

→ Overprinting varnishes – Some considerations on the application

International packaging markets

→ The market for printing and converting of packaging in Latin America

In an interview, the Spanish manufacturer of printing and converging equipment for the manufacturing of flexible packaging talks about its experience and current position in this huge and most promising market. In this context, also some peculiarities of this region are described.

Lamination machines and lamination adhesives

→ Compact lamination machines – an overview (Part 2)

In package production, compact lamination machines are increasingly being used, because they offer some very attractive additional benefits. The editorial team of Flexo & Gravure Global asked 12 manufacturers of lamination machines to give their opinions about the current lamination technology and also to introduce their respective products.

→ Eco-efficiency of lamination adhesives for flexible packaging

Gravure printing

→ Gravure printing without proofing?

The process of gravure printing cylinder preparation has been significantly improved during the last 20 years with the introduction of faster engraving machines, more precise engraving processes and fully automated preparation lines. However, with all this progress, one process step is mostly neglected which is the proof printing of finished gravure cylinders.

Markets and events

→ FTA Fall Conference 2018 – a review
